Regional Fibroblast Heterogeneity in the Lung: Implications for Remodeling

Chakradhar Kotaru, Kathryn J. Schoonover, John B. Trudeau, Mai-Lan Huynh, XiuXia

Zhou, Haizhen Hu and Sally E. Wenzel

Table E1. Baseline subject demographics, pulmonary function and systemic steroid use. M=Male. F=Female. Atopy was measured by skin testing to a panel of common indoor and outdoor antigens. Data shown refer to skin test positivity to either set of antigens, both or neither. FEV₁=forced expiratory volume in one second. Methacholine PC20=provocative concentration of methacholine required to decrease FEV₁ by 20%. PC20 data was not possible in 3 subjects due to low FEV₁ on day of testing.

Subject	Age (years)	Gender	Atopy	FEV ₁ (L)	FEV ₁ (%Pred)	Methacholine PC ₂₀ (mg/ml)	Oral Steroid Use
1	47	M	Both	2.74	64	0.51	No
2	41	M	Both	2.61	64	-	Yes
3	46	F	Both	1.76	59	0.29	No
4	46	F	Outdoor	2.44	70	1.34	No
5	29	F	Both	2.03	56	1.77	No
6	50	M	Indoor	1.82	49	-	Yes
7	48	M	Neither	2.01	53	0.29	No
8	20	F	Indoor	3.69	103	3.63	No
9	50	F	Neither	2.61	90	1.83	No
10	28	M	Both	2.30	59	0.68	No
11	32	M	Both	2.69	63	0.99	No
12	23	F	Both	2.39	58	0.07	Yes
13	27	M	Neither	2.99	63	0.62	Yes
14	59	M	Neither	2.58	81	0.25	No
15	47	M	Both	1.72	45	0.25	Yes
16	33	M	Neither	1.84	42	0.29	Yes
17	41	F	Indoor	1.84	57	0.31	Yes
18	29	F	Both	1.91	58	-	Yes
